## Vidyo.io to VidyoPlatform API Migration Services

Free your developers to focus on the user experience and leave the video to us. Our dedicated API consultation services, provided by an experienced API Developer Advocate, will help you migrate your vidyo.io solution to the new VidyoPlatform.

### Overview

If you are a Vidyo customer with an existing application built within the previous generation vidyo.io environment, you can now migrate to the new VidyoPlatform and benefit from the key features below. This migration service will include Vidyo's expertise and guidance with regards to updating your client application code so that it is compatible with the new VidyoPlatform environment.

### VidyoPlatform Benefits

- **NativeWebRTC Support** – VidyoPlatform does not require a transcoded WebRTC solution as it supports Vidyo's Native WebRTC connections with simulcast support. It provides lower latency and higher resolution, which enhances the join and in-call experience through a supported browser. Vidyo has also added support for mobile WebRTC (Chrome on Android and Safari on iOS) and support for the Microsoft Edge browser.
- **Hybrid Recording/SIP Services** – VidyoPlatform supports a hybrid deployment of the VidyoReplay recording solution, which offers increased security by localizing your recording streams. VidyoPlatform also supports localizing SIP services to integrate voice calls (inbound and outbound).
- **Web Services API** – This new API allows developers to quickly integrate Vidyo's solutions into their existing work management applications (e.g. CRM), allowing them to video-enable any existing application.
- **Turn-key VidyoConnect Applications for the Guest Experience** – Rather than building two separate applications for your registered users vs. guests, you can focus your development effort on the registered user experience and leverage the use of our VidyoConnect for Desktop/Mobile as well as VidyoConnect for Native WebRTC for the guest experience. Custom-built and out-of-the-box VidyoConnect applications can now coexist! Furthermore, you benefit from VidyoConnect's new features.

### Basic API Migration Service:

- VidyoPlatform infrastructure and call flow overview
- Key differences from vidyo.io
- Added capabilities (that don't exist in vidyo.io)
- Client APIs overview (VidyoClient)
- Server APIs overview (web services—SOAP)

### Advanced API Migration Service (includes Basic API Migration Service):

- Deep dive into customer's use cases
- Review existing vidyo.io integration
- Integration point detection, 'designing' what and how changes will be made, focusing on preserving existing vidyo.io integration as much as possible
- Vidyo will share suggestions and ideas regarding how to extend usage of VidyoPlatform to add new features which were not available in vidyo.io
